

## CMMS - Condition Monitoring & Maintenance Systems

- ▶ Company CMMS is specializing in Vibration Analysis, Signal Processing, Software Design and Digital Electronics. The other part of business is integration of Condition Monitoring, Inspection, Lubrication and Alignment data into Maintenance system.
- ▶ Sales and service occurs throughout the CMMS offices, as well as through dedicated representatives.
- ▶ CMMS headquarters is situated in Prague, Czech Republic. A fully competent team takes care of sales, service and support worldwide. Besides that we have representatives in Slovakia and Hungary. CMMS® has production facilities in Czech and Slovak Republic.
- ▶ The business involves the development, production and marketing of:
  - Sensors
  - Instruments
  - Software
  - Services
  - Steel Shims
- ▶ A small company is innovative and flexible, providing fully integrated, multi-platform products designed to provide solutions for increased productivity.
- ▶ CMMS provides a range of solutions for multi-channel machinery monitoring, protection, data acquisition and analysis - from portable analysis systems to integrated on-line installations in the field. CMMS has more than 17 years experience in development, production and service of instruments for monitoring, analysis and diagnosis of mechanical behavior of critical machinery.
- ▶ CMMS sells both to OEMs and after market in a variety of industries.
- ▶ CMMS values include customer satisfaction, quality and innovation, with an internal emphasis on open/honest communication, ownership and responsibility. Management strives at all times to encourage and recognize individual contribution for the benefit of the company and its customers and to provide the training and education to enhance the competence of each employee.
- ▶ The company's foremost goal and greatest achievement is in assisting customers to facilitate optimum productivity, utilizing our Protection Solutions to improve utilization, reduce maintenance cost and enhance the quality of the product produced.

## Plant wide Maintenance through Condition Monitoring

- ▶ By offering **Integrated Solutions**, CMMS has positioned itself to provide:
  - Multi-Parameter monitoring for excellence in roller bearing prediction
  - API 670/API 678
  - Intuitive software, facilitating accurate analysis and appropriate action on information obtained
  
- ▶ Today's industry is looking for real solution to help address the challenges of an intensely competitive global marketplace. Offering a complete line of products, for all kinds of monitoring, CMMS specialists work to create a comprehensive, long-term solution to best meet a customer's individual needs.
  
- ▶ The goal for CMMS in providing industry with solutions for productivity is to continue to offer multi-platform products that easily integrate into Digital Control Systems (DCS), enabling customers to tailor a system according to their own specific requirements.
  
- ▶ CMMS offer a complete maintenance solution through Condition monitoring, Inspection, Lubrication, Alignment and their integration into Computerized Maintenance Management System.
